DETAILED ACTION

Allowable Subject Matter

1. Claims 1-25, 27-28 and 30-31 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art neither anticipates nor renders obvious the precise combination of limitations recited in newly amended independent claims 1, 30 and 31, said limitations specifically calling for: a polymer-based security element having a metallic design provided by a combination of metal and non-metallic regions, said metallic design incorporating at least one repeating pattern of which one or more of frequency, instantaneous amplitude and maximum amplitude of the pattern varies constantly along the length of the element, wherein the metallic and magnetic designs do not overlap. The prior art cannot be reasonably combined in such a manner as to meet the requirements set forth in the aforementioned limitations or Applicant's remaining dependent limitations absent the use of improper hindsight.
3. The closest prior art is U.S. Patent No. 5,354,099 to Kaule et al. ("Kaule"), which generally describes a magnetic metallic safeguarding thread with writing disposed thereon. One might argue that Kaule implicitly discloses Applicant's general invention, given that both Kaule and Applicant's claimed invention are directed to security elements having magnetic and metallic features.
4. However, Kaule fails to specifically disclose a metallic design incorporating at least one repeating pattern of which one or more of frequency, instantaneous amplitude and maximum amplitude of the pattern varies constantly along the length of the

element, a design of said magnetic feature having a varying size and shape along a length of the element and not extending across a full width of the elongated strip, while not overlapping with the magnetic feature.

5. Examiner is aware of U.S. Patent No. 4,943,093 to Melling ("Melling"). Melling teaches the concept of providing a metallic feature which runs along the length of a security element with a defined pattern, but no motivation is found to modify Kaule to obtain the claimed invention of newly amended independent claims 1, 30 and 31, as it would not have been obvious to a person of ordinary skill in the art at the time of the invention to: i) modify the Kaule negative writing to conform with the metallic pattern seen within Melling fig. 13; ii) modify the Kaule magnetic feature to conform with the metallic pattern seen within Melling fig. 13; and iii) make both of the foregoing modifications in such a manner that the magnetic feature is positioned not to overlap with the metallic design. Furthermore, to modify the base reference to obtain the claimed invention would destroy the workability of said reference, as the Melling metallic pattern variation is achieved by cutting off the edges of the pattern, which would result in the removal of essentially the entirety of the Kaule magnetic feature.

6. With regard to the remaining limitations that Kaule fails to specifically disclose, the prior art fails to teach said remaining limitations, along with proper teaching, suggestion or motivation for making the requisite combinations without the use of improper hindsight. Furthermore, the number of additional references and the manner in which said references would be required to be modified would be strongly indicative of the use of improper hindsight.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
